--------------------------	------------------	------------------------------	-------------------------

SUMMARY

Software Developer with **4+ years of experience** building scalable, high-availability web applications using **React.js, TypeScript, JavaScript (ES6+), Golang (Gin), Node.js, REST APIs**. Proven track record in frontend performance optimisation, microservices architecture, and CI/CD-driven delivery. Experienced in Agile/Scrum environments, code reviews, and cross-functional collaboration. Holds foundational knowledge of **Large Language Models (LLMs)** and prompt engineering. Strong focus on web accessibility (WCAG 2.1), unit testing, and shipping production-grade full stack applications.

SKILLS

- **Frontend:** React.js, React Hooks, Context API, JavaScript (ES6+), TypeScript, HTML5, CSS3, Responsive Design, Cross-Browser Compatibility, Web Performance Optimisation, Accessibility (WCAG 2.1).
- **Backend:** Go / Golang (Gin framework), Node.js, Express.js, RESTful API Design, Microservices Architecture, Concurrency, Redis, MySQL, PostgreSQL, SQL.
- **AI / LLM:** Large Language Models (LLMs), Transformer Architecture, Prompt Engineering, Tokenisation; familiarity with Claude & OpenAI APIs.
- **DevOps & Cloud:** AWS (CloudWatch, CodeBuild, S3), CI/CD Pipelines, Docker, Git, Bitbucket, SonarQube, Vercel, Postman, Swagger / OpenAPI.
- **Testing & Quality:** Unit Testing, Integration Testing, Jest, Golang testing package, SonarQube Security Scanning, NVDA Screen Reader Testing, Code Reviews.
- **Methodologies:** Agile, Scrum, System Design, Data Structures & Algorithms, Performance Debugging, Root Cause Analysis.

WORK EXPERIENCE

IMPELSYS PVT LTD. Software Engineer I	Bengaluru, India Apr 2024 – Present
• Led full stack development of a React.js analytics dashboard (Google Charts, React Hooks, Context API) with dynamic multi-level filters; adopted by 10,000+ users, cutting report-generation time by 40%. • Achieved a 57% reduction in initial load time (2.8 s → 1.2 s) through code-splitting, lazy loading, memoisation, and component re-render optimisation — applying advanced web performance optimisation techniques. • Designed and shipped RESTful APIs end-to-end in Golang (Gin) and Node.js / Express.js: schema design, Swagger/OpenAPI documentation, unit & integration tests (Jest), and >90% code coverage. • Architected Golang microservices for international certificate processing with multi-system integrations; Redis caching layer reduced data-retrieval latency by 60% under peak concurrent load. • Achieved WCAG 2.1 compliance through NVDA screen reader audits and ARIA refactoring, ensuring full cross-browser compatibility and inclusive UX across all supported platforms. • Utilised AWS (CloudWatch, CodeBuild CI/CD pipelines, S3) for deployment operations and authored optimised SQL queries for production reporting workflows.	
Software Engineer Trainee	Aug 2022 – Apr 2024
• Built a configurable React.js self-serve reporting system using custom hooks and reusable components; reduced report-generation time by 50% and eliminated dependency on engineering for admin-level reports. • Lifted Jest unit & integration test coverage from 30% → 80%; resolved SonarQube-flagged vulnerabilities, resulting in zero security incidents post-release and strengthening CI/CD pipeline reliability. • Primary contact for 5–6 monthly customer-reported bugs in the AHA application; applied root-cause analysis, coordinated cross-team fixes, and improved mean time to resolution (MTTR). • Authored a reusable React.js component library (hooks, Context API patterns) adopted across 8 applications, cutting duplicate code by 50% and accelerating Agile sprint delivery for the frontend team.	
Software Engineer Intern	Mar 2022 – Aug 2022
• Built an in-house React.js planning poker application (JavaScript ES6+, REST API integration) adopted as the standard Agile sprint estimation tool, cutting planning sessions from 60+ to under 30 minutes.	

EDUCATION

• Master of Computer Applications (MCA) RV College of Engineering, Bengaluru	CGPA: 7.74 / 10.0
• Bachelor of Computer Applications (BCA) Bapuji Institute	CGPA: 7.53 / 10.0
